

Serious Complications Encountered During Dental Treatment

Various dental emergencies are encountered during dental treatment. For example, uncontrollable dental haemorrhage following extractions, rapidly increasing swelling around the throat or eye, trauma to the dental arches etc. For instance, some of such situations in prosthetic dentistry are repair or refixing of crowns or bridges, repair of broken dentures, the need for temporary or immediate dentures, and problems with implants. Furthermore, there are many situations in which an attention is required urgently in dental practice.

Importance: Dentists must be prepared to manage medical emergencies which may arise in dental practice. It includes the patient reassurance and management.

Goal: This thematic issue focuses on providing immediate identification, evaluation, care, stabilization to patients in response to the emergency in dental practice.

We welcome contributions from international researchers and clinicians to contribute Case Reports, Original research, and Reviews, Mini-reviews, Short communication, and Letter to the Editor in the areas of dental emergencies.
